ABSTRACT

This report provides information to City College of San Francisco (CCSF) faculty and administrators about graduating high school seniors who have enrolled at CCSF. This report will be produced annually and disseminated to all San Francisco Unified School District high schools and CCSF deans, program coordinators and department chairs. The report is divided into eight sections organized around tables that present descriptive information about the performance of new 16- to 19-year-old students at CCSF in the 1998-1999 school year. The first three sections look at placement in English, ESL and mathematics of new 16 to 19 year old students. In English and mathematics, half of these students placed at a basic skills level. In ESL placement was somewhat higher for both students from SFUSD high schools as well as from high schools outside of San Francisco. Statistically significant differences also existed within the cohort of students examined. Differences existed by type of high school, with the students from the continuation high schools doing the least well in both the fall and the spring. The real differences existed at the individual high school level. Student from both Lowell and foreign high schools did notably better than others. (JJL)

Executive Summary

This report was originally requested by high school principals who wanted to know what happened to their graduating seniors once they enrolled at CCSF. After reviewing the data, the Office of Research, Planning and Grants decided that it would be useful to distribute this report more widely and to include City College faculty and administrators. The Office of Research, Planning and Grants will produce this report annually and disseminate it to all SFSUSD high schools and CCSF deans, program coordinators and department chairs. The report is divided into eight sections organized around tables that present descriptive information about the performance of new 16 to 19 year old students at City College of San Francisco in the 1998 - 1999 school year. These students were not concurrently enrolled in high school.

The first three sections look at placement in English, ESL and mathematics of new 16 to 19 year old students. In English and mathematics, half of these students placed at a basic skills level. In ESL placement was somewhat higher. This was true of both students from SFUSD high schools as well as from high schools external to San Francisco. Upon enrollment, these students' success levels both overall and in heavily enrolled academic areas was average. This level of success stayed the same from the Fall to the Spring semesters. This is in spite of the fact that one quarter of these students failed to re-enroll in the Spring.

Statistically significant differences also existed within the cohort of students examined. Slight differences existed between SFUSD students and others but these differences, though negative, were by and large not statistically significant. Larger differences existed by type of high school. It was the students from the continuation high schools who did the least well in both the Fall and the Spring. These students, however, made up only 20 of the 1829 students examined. The real differences existed at the individual high school level. In both the Fall and the Spring, students from both Lowell and foreign high schools did notably better than others. Students identified from other San Francisco and California high schools did less well. These differences were statistically significant at the .05 level or higher.

Introduction

This report looks at the performance of new credit students at City College of San Francisco in the 16 to 19 year old age bracket. It categorizes them by their high school of origin if that high school is within the San Francisco Unified School District. Otherwise, it identifies new students as coming from other San Francisco schools, other California schools, other U.S. high schools or other foreign high schools. The report presents their placement, their performance in the Fall and Spring 1998, and their re-enrollment in the Spring. These tables taken together present a picture of the adequacy of student preparation in high school for college level work.

The first three tables present the placement of these students in English, mathematics and ESL. The next two tables present their performance in the Fall 1998 semester. The sixth table presents their re-enrollment in the Spring 1999 semester. The last two tables present the performance of remaining new Fall students in the Spring. One caution needs to be made of this data. The fields of 'high school' and 'age' are self-reported fields, and consequently, we cannot be sure that all the data is absolutely reliable. We do think that students in general identify their age and high school accurately.

English, Math and ESL Placement Levels

The first three tables present the number and percent of new students who place at each of three levels in English, mathematics and ESL. To understand these tables one must understand the placement categories of basic skills, degree applicable, AA degree, and CSU and UC transfer.

Basic Skills

Basic Skills is the lowest level placement. A placement this low means that students need substantial remediation before attempting college level classes.

Degree Applicable

The next highest level is degree applicable. This is still a remedial placement but units taken in these classes can be applied towards graduation at CCSF ONLY.

AA Level (ESL Only)

The next highest placement is AA level. This occurs in ESL only. When students who place at this level pass this class, they will have met the English requirement for the fulfillment of an Associate of Arts (AA) degree.

Transfer Level

The last two levels are transfer. A transfer level course is one which fulfills a graduation requirement in either the UC or CSU system. With the successful completion of one of these courses a student has no need to take a similar course once they transfer to a state university. English 1A (Freshman Composition), for example, is a CSU transfer level course. The next higher course, English 1B, is a UC transfer level course. These courses meet the English requirements for graduation in the CSU and UC systems respectively.

Tables 1, 2 and 3 represent the ability level of incoming students through their placement into CCSF discipline sequences in English, mathematics and ESL. That ability level is not particularly high. About half of entering 16 to 19 year old students place at the lowest ability levels in English and mathematics. SFUSD students place similarly to the overall average.

Grade Point Averages, Units Taken and Units Passed—Fall 1998

The fourth table presents the number of students, their unit load - the average number of units taken, their GPA, and the percentage of units passed. The last two measures are indicators of student success. GPA refers to grade point average. Grade point average runs from zero for students who fail all classes to 4.0 for students who receive A's in all classes. If a student received all C's, he or she would have a GPA of 2.0. 'Percent of Units Passed' is the percentage of enrolled units in which students get grades of 'A', 'B', 'C', 'CR'. These are passing grades.

Total			938	9.77	2.35	62%
Grand To	otal		1828	9.13	2.00	51%

Overall, the performance of students in this group was average. Their overall GPA was 2.0 (a 'C' average) while they passed roughly half of their units.

The fifth table presents the percent of units passed in four heavily enrolled academic areas. In some cases, there are no entries. This indicates that students from the associated school took no units in this area. For example, students from Ida B. Wells took classes only in Social Sciences and did not pass them. Their passing percent was zero. The prior table on enrollment and success indicates that there were only six Ida B. Wells students and overall they passed only 12% of their units. Tables four and five taken together can be used to judge not only overall performance of SFUSD students but also to make judgments of how they did by academic area.

The four academic areas presented in table five are as follows: 1) Liberal Arts is the school in which English is located. 2) The Social Sciences school has numerous general education courses. These include psychology and sociology. 3) ESL is the English equivalent school for nonnative speakers. 4) The school of Mathematics and Science has a number of general education courses. Students who are seeking a degree must complete courses in these areas as part of their educational sequence.

Performance within academic areas varied by area and by high school group. In general students passed the most units in ESL (65%) and the fewest in Math and Science (46%). The performance of SFUSD students mirrored the overall averages, however, in all academic areas SFUSD students did slightly worse than others.

Spring Semester Re-enrollment

The sixth table presents the number and percent of Fall students re-enrolling in the Spring semester. From this table one can gauge the persistence of students from each high school.

Table 6

Grand To	<u>tal</u>		481	26%	1347	74%	1828

Three quarters of these new 16 to 19 year old students re-enrolled in the Spring. This was somewhat higher than new students in general. About 60 percent of them re-enrolled. SFUSD students re-enrolled in slightly greater percentages than others. Within the SFUSD system, it was only the continuation students who tended not to re-enroll.

Grade Point Averages, Units Taken and Units Passed—Spring 1999

The seventh and eighth tables present the same information for the Spring 1999 that tables four and five did for the Fall 1998 semester. However, the numbers represent only the students who continued on from the Fall. Consequently the total number of students continuing from the Fall to the Spring in Table 6 of 1,347 equals the total number of students represented at the bottom of Table 7.

In general these young new students did no better in the Spring than they did in the Fall. Their GPA improved marginally to 2.07 while the percentage of units passed decreases slightly to 50 percent. SFUSD students also failed to show much improvement. They passed 48% of their units in the Fall, and 47% in the Spring. Little improvement is shown except for the small numbers of continuation students.

When performance in the Fall and Spring is compared by academic area in Tables 5 and 8, little improvement can be seen. Certainly no patterns of improvement are evident.
